

## ***MERINGUE***

8 x-large egg whites or 12oz liquid measure (Must be clean, no yolks).

1# granulated sugar (16oz)

2 T Cream of Tartar, slightly rounded.

Use your whip attachment on your mixer.

Add egg whites first, and the sugar & cream of tartar together. Start at a medium slow speed for about a minute, then switch to high, and whip till you get a firm peak, and sugar granules are completely dissolved.

This icing is for decoration purposes. It is not strong enough to hold the house together. Use the meringue to cover the base, hang icicles from roof, trimming window sills or trees branches, fences, street lights as fallen snow or drifts.

This is enough to finish 2 houses depending on the area of the base the house rests on. This icing is also suitable for covering with ground oreo cookies for an "earth" effect or yellow corn meal for "beach effects".
